Claims 7-34 have been cancelled.

Claims 5-6 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on December 15, 2003.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1 and 35/1 are rejected under 35 U.S.C. 102(b) as being anticipated by Johnson.

Johnson shows a gas line slidably mounted on a rail 42 and discloses at column 12, lines 18-29, that each rail 42 can be slidably mounted on transverse or orthogonal rails.

Applicant's arguments filed February 15, 2008 have been fully considered but they are not persuasive. Applicant's arguments have been fully addressed in previous Office Actions. The Examiner can only note that the "gas handling device" 40 of Johnson is a gas stick, and is exactly the same structure recited in the claims.

Claims 1-4, 35, 37-42, and 44-48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Johnson in view of Itoh et al. Johnson shows the claimed device except uses tubing connected fluid handling devices. Itoh et al show an improvement over tubing connecting fluid handling devices with coupling blocks 21 for mounting the fluid handling devices. It would have been obvious for one of ordinary skill in the art at the time the invention was made to have configured the Johnson gas line from such

modular components as taught by Itoh et al to reduce costs, for example. The provision of a spare rail for future use is considered to be an obvious expedient. Assembling a system as recited in the claims is seen to be an obvious step.

Applicant's arguments filed February 15, 2008 have been fully considered but they are not persuasive. Applicant's arguments have been fully addressed in previous Office Actions.

Claims 36 and 43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Johnson in view of Itoh et al and further in view of Markulec et al.

Johnson, as modified, shows the claimed device except for the shape of the tracks. Markulec et al show a gas stick system with a downward tapered groove and nut, see Figure 6a. It would have been obvious for one of ordinary skill in the art at the time the invention was made to have used such a downward tapered groove and nut in the system of Johnson, as modified, in view of the readily apparent equivalence between the two tracks.

Applicant's arguments filed February 15, 2008 have been fully considered but they are not persuasive. Applicant's arguments have been fully addressed in previous Office Actions.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
